PROJECTS

Web-Based Hostel Management System | [GITHUB](#)

Mar'26

- Developed a web-based hostel management system to digitize student registration, room allocation, and complaint management .Implemented separate Student and Admin modules with role-specific functionality.
- Developed student features including self-registration with roll number verification, login, profile viewing, room details, and complaint submission.
- Developed admin features for student management, room allocation, vacancy tracking, and complaint handling.
- Built the backend using Python Flask and integrated MongoDB Atlas for cloud-based storage of student and hostel data.
- Designed a responsive and user-friendly interface using HTML and Tailwind CSS.

Tech Stack: Python Flask, MongoDB Atlas, HTML, Tailwind CSS

CERTIFICATES

Python(Basic) | HackerRank
